

Edge To Edge Support

Edge To Edge Support

Comfortaire's innovative product designs have been the benchmark of the air mattress industry for nearly 25 years. Through continued product development, we have recently introduced several innovative mattress designs that are truly redefining air sleep standards.

In essence, support comes from premium Omalon® support pads below, and the air above simply follows spine alignment, while the top mattress cover supplies premium comfort.

Original air mattresses designs utilized air chambers as support modules, much like a spring unit, deep inside the mattress. However, the advent of our new low profile (urethane alloy) air cores and box top designs have allowed us to maximize the benefits of air by placing it at the top of the mattress where it can gently form to each unique body shape. In essence, support comes from premium Omalon® support pads below, and the air above simply follows spine alignment, while the top mattress cover supplies premium comfort.

Our new low-profile chamber allows us to extend the air chamber all the way to the edge of the bed for a full measure of comfort.

Original air bed designs used thicker air chambers that required a perimeter support of stiffer foam to create an edge for the bed that you could sit on. Our new low-profile chamber allows us to extend the air chamber all the way to the edge of the bed for a full measure of comfort.
